Chair-footprint setting-out template / 1:1

A0 portrait · 841 × 1189mm · Print at 100% actual size · Measure the 100mm calibration line

Solid = at rest / Blue dashed = pulled backwards by 300mm

Align the two sled rails with the bold outlines. Thin lines show the projected seat shell.

Use this template for both chairs; rotate to each facing angle in the A3 schedule.

Measure this line: it must be exactly 100mm

Disable Fit / Shrink. For tiled A4 printing, use at least 10mm overlap and check the calibration first.
